

Pattern Name

Introduction: Inspiration. Overview of design. Summary of construction.

Notes on the pattern itself: are there any tutorials? Does it provide instructions for other versions or variations, or tips on alteration? Are any pattern stitches charted?

If there's something special about the yarn, provide information about it, and suggest possible substitutions.

DIFFICULTY LEVEL/SKILLS REQUIRED/TECHNIQUES USED

Some sort of statement of what the knitter needs to know to successfully work the project.

MATERIALS

Yarn

A single yarn/color:

CompanyName YarnName (fiber content; #yds/#m per #oz/#g skein/ball)

skeins/balls

Sample uses color #/name

Multiple colors:

CompanyName YarnName (fiber content; #yds/#m per #oz/#g skein/ball)

MC: color #/name; # skeins/balls

CC1: color #/name; # skeins/balls

CC2: color #/name; # skeins/balls

Optional but nice to include: suggestions for yarn substitutions, either by brand or characteristics

Hooks

#mm/US letter and/or # crochet hook

Notions

List all – don't forget cable needle, stitch markers, holders; buttons, zippers.

TENSION

If worked flat:

sts/# rows = 10cm/4 inches square in <pattern stitch>

If worked in the round:

sts/# rounds = 10cm/4 inches square in <pattern stitch> turning/without turning at the end of each round

For motifs:

Finished motif (A) measures xcm/xin across.

Note: if multiple hook sizes are used in the pattern, make it clear which size are used for tension. It may sometimes be easier to count in special stitches rather than individual stitches, be sure to specify what you are counting eg 5 shells/4 rows = 10cm/4in.

SIZE INFORMATION

Sizes

List all sizes, by name.

First (second, third, ...)

XS (S, M, L....)

For garments or accessories that need to fit in a specific way, it's very helpful to provide guidance on choosing a size, e.g.: Choose a size based on... Choose the size closest to your actual measurements...

If appropriate, note which size is being worn in the photographs, and how it's fitted – e.g. Model is wearing size S, with about 5cm of positive ease.

Finished Measurements

Give key dimensions of the pieces worked, for all sizes.

Dimension 1: # (#, ...) cm/# (#, ...) inches

Dimension 2: # (#, ...) cm/# (#, ...) inches

Schematic

Include one for anything but very basic shapes. The purpose of the schematic is to show the details of the shape of the piece, and also expand on the finished measurements information.

ABBREVIATIONS, GLOSSARY, REFERENCES, TECHNIQUES

Set out the terminology used. Eg: This pattern is written and charted using standard UK crochet terminology.

Special stitch instructions: decreases, increases, cables, etc.

References or tutorials as required.

PATTERN NOTES

Construction overview

Optional but nice to have: Tips for working the pattern, tips for adjusting size, notes on alternate versions or variations.

Special Pattern Stitches as used in the pattern: Charts and/or written instructions.

Chart Legend.

Optional to avoid specifying on each Row/Round: Does the turning chain count as a stitch or not, if working in rounds do you turn at the end of each round or work with RS/WS always facing?

METHOD

<the actual instructions>

FINISHING

Blocking instructions.

Seams; edgings.

Weave in ends.

- TIPS ON WRITING THE INSTRUCTIONS -

Use headings to establish where you are in the construction and to break up the text a little and make it easier to read.

Decide on a standard format for row instructions – capitalization, punctuation, repeat indicators, etc., and be consistent:

e.g. *“Row 1 (RS): Ch1, (2dc, 2tr) to last 2 sts, 2dc, turn..”*

Should that initial Ch be capitalized or not? Or capitalize all the abbreviations? DO you write 2 dc or 2dc or dc2? Alternatively you may write “1 dc in each of next 2 sts”? Does the instruction for the turning chain come at the end of the row or the start? Full stop at the end of a row? Is Row capitalized? Do you spell out Round or use the abbreviation Rnd? How are chain spaces abbreviated and are they counted in stitch counts?

It’s often necessary to specify where stitches are to be placed,

e.g. *“3tr in 1ch-sp, miss 3 tr.”*

Approach this in a systematic way, what assumptions are you making?

For repeats, do you use () as above, or [], or the *; formulation,

e.g. *“*2dc, 2tr; repeat from * to last 2 sts, 2dc.”*

If you have numbers for multiple sizes, be consistent about how you show them. These are examples of how you might do it – establish your method and be consistent:

e.g. *1 [2, 3, 4] or 1 (2, 3, 4) or 1-2-3-4.*

After increases or decreases, state the stitch count; if the row is to be repeated, give the change,

e.g. *“1 stitch decreased.”*

Use specific increase and decrease methods, rather than just “inc” or “dec”.

Make sure that if project is worked in the round, instructions are written for rounds not rows. And it’s easy to forget the instruction to join in the round! Specify also whether or not to turn at the end of the round or not. This can either be done on each round instruction or in the pattern notes.

When giving an instruction to work to a specific distance, specify if the crocheter needs to finish with a particular side or pattern row,

e.g. *“ending on a WS row.”*
